Airlux II

What makes the Airlux II your first choice in clean air?

- **Cleaner air** - HEPA Filtration removes allergy and asthma causing particles from the air you breathe.
- **Reassurance** - Totally sealed system insures that the filter media captures particles and doesn't allow them to recirculate into the air.
- **Natural** - An ionizing generator cleanses the air by introducing negative ions, a process that occurs in nature.
- **Efficient** - A washable pre-filter of activated carbon provides extra efficiency in removing large particles and odors.

Quality products and personal service have been an Electrolux® tradition for 77 years. And after talking with millions of customers, we have become experts in what it takes to create a healthy living environment. This insight developed into an opportunity we call Aerus™, a company that isn't just about making homes cleaner, it's about making lives better.

Recent research indicates that most people experience some type of reaction to biological pollutants in the home. In fact, indoor air can often be 5 times more polluted than our outside environment! These indoor pollutants adversely affect 1 in every 4 individuals, causing allergies or other related diseases. How do you combat these alarming issues and ensure that your family's wellness is not jeopardized? With products like the Airlux II by Electrolux®. With HEPA filtration, the Airlux II removes these allergy and asthma causing particles from the air. Even if you don't have family members who suffer from allergies and asthma, you owe it to yourself and your family to include the Airlux II in your healthy home.

In a typical bedroom the unit will change the air in the room 4.4 times per hour.

Swivel lower grill outlet

Allows for directional control of fresh air.

specifications

electrical rating	50 watts at 120 volts AC, 60 HZ
weight	9 lbs.
dimensions	16" high x 8.5" wide x 11" deep
cord length	5 ft.

We offer a limited 1-year warranty on the Airlux II.

What is a HEPA filter?

A HEPA filter captures asthma and allergy causing particles. The filter media is made of thin glass fibers, which are actually made into paper, similar to the way wood fiber are used to make paper. Air can hardly penetrate through the dense glass paper, so a very large area of paper must be used to permit filtering and movement of large quantities of air. For that reason, the filter is pleated to create an "extended surface."
